

SLBI Foresight

Successful ERP and Digital Transformation Projects should begin with foresight.

Let us show you how SLBI Foresight can kick-start your project to a successful outcome.

Experience Matters. We Put it to Work for You.

We've been involved in most all facets of complex ERP and other Digital Transformation projects over many years, from all angles – technical and organizational. We're very clear about why projects succeed – and how to leverage that for you. We've also been introduced into failing projects, further bolstering our knowledge of how to steer you clear of the hazards that commonly throw these projects into disarray.

So, we developed the SLBI Foresight process to quickly assess the readiness of your organization for whatever type of Digital Transformation journey may lie ahead, leveraging our experience and learnings. It's designed to ensure that the executive team is aligned and aware of what the pending project will entail, and how to manage towards its success from very early on.

Working with SLBI

We want your project to succeed. Working together as your advocate from the onset will help you reach your project goals more assuredly.

Our team's collective experience extends your project team to ensure you're putting your best resources on the table to tackle the project ahead. We've been in hands-on roles in ERP and other software implementations, and have executed change management, data strategy and project leadership. We've also held positions in public accounting, corporate finance, IT governance, IT management, digital data and analytics, and operations – among others.

Key Foresight Features:

Methodologically Sound.

We've developed competent, proven methodologies for the work we perform. Our consultants follow processes to deliver meaningful and architected results that are within the parameters of the scopes we commit to.

Bullseye on User Adoption.

SLBI Foresight is designed with the end in mind. That "end" envisions achievement of your project's technical goals and stated business objectives. Both are vital to success. Once achieved, you have reached the ultimate goal: "adoption".

Objectivity: We Don't Sell or Implement Software – We Advise.

We focus on delivering relevant insights about your project. We're less concerned with convincing you to buy the latest "hot" technology that probably isn't ready for prime-time, anyway. And, unlike some other consultants, we don't collect referral fees secretly behind your back while saying we are "independent".

No Long-Term Consulting Commitment.

The SLBI Foresight deliverables are foundational and (of course) foresightful. If you want to leverage them with your internal team, we understand that's an option. We also can stay on as advisors to provide turnkey guidance from any number of our skillsets and existing SLBI Methodologies. Either way, you win when you start the right way.
