

CyberFirstPass - Targeted Engagements to Assess YOUR Cyber Capabilities

CyberFirstPass engagements are our way of helping our clients address specific and focused cybersecurity threats without undertaking a more time consuming and comprehensive information security maturity assessment. These engagements deliver seasoned analysis, thoughtful recommendations and, when appropriate, remediation of systems to address identified threats and exposures. These can help overcome what we often see is a false sense of security by the executive team.

Our SL Cybersecurity team operates under this premise: **Managing cybersecurity is a process, not a “one time event”**. You need to start somewhere. Let’s take the first step together by examining a key risk area through at CyberFirstPass engagement. Contact us to get started.

Your Cybersecurity Concerns:

Our CFP solutions are designed effectively help you assess these concerns:

- ✓ Is our outsource IT vendor actually secure?
- ✓ Is a hacker already in our systems?
- ✓ Is our Microsoft 365 setup for prudent security?
- ✓ We don’t have a cyber incident response plan!
- ✓ Are we at risk of a cyber insurance payout refusal?
- ✓ Are our employees able to recognize cyber threats?
- ✓ We were just hacked – what now??

Our Process

- ✓ **Project Planning & Orientation:** collaborate with your team to understand the company and IT systems environments.
- ✓ **Project Execution:** observations, inquiries, forensic procedures, configuration review, training, roadmap development, as applicable, based on the selected CFP scope.
- ✓ **Summary Meeting:** review strategic findings, roadmap, and any holistic recommendation to remediate gaps.
- ✓ **Reporting:** tailored reporting or summary highlighting findings and recommendations reviewed during the summary meeting.
